2. Plug in the pump power , make sure collection cup on the suitable position, and tighten the screw C (don' t wring to tightly)

4. QQ2 installation sketch map

Notice:

1. Please make sure full water in the water pump before start it, **Prohibit pump operate without water.**
2. If installation is correct, it should appear much bubble quickly when pump start up. If no bubble or pump makes a noise or strenuous shake, please stop and restart up. If it can't solve the problem, please contact dealer or our technology person.
3. Every product tested before leaving factory, so some water blob maybe leave on it. It's not used vestige and wouldn't affect use.
4. Just start to use a few days its result maybe is no very good, this is a normal phenomenon. After a few days it can be normal working, if washing completely skimmer inside, this time will be reduced.
5. Please adjust bubble level according to aquaria's pollute. Don't adjust water level too high avoid water quality fluctuate cause much water effused.
6. Please wash collection cup at the fixed date, if sludge heaped inside the collection neck it will affect used result. Suggest cleaning skimmer body and pump every one or two month, don't use chemical to clean protein skimmer.
